DevOps Engineer

ES-14010

We are looking for a new colleague to our Israel based partner company which develops data intelligence and analysis platforms. This is a full time – remote – position that can be filled in entrepreneurial form.

Responsibilities:

- Analyze current technologies which are being utilized by the company and develop steps and processes to improve and expand our capabilities
- Provide clear goals for all areas of a project and develop steps to oversee their timely execution
- Work closely with engineering professionals within the company to maintain hardware and software needed for projects to be completed efficiently
- Work alongside project management teams to successfully monitor progress and implementation of initiatives

Requirements:

- Very advanced knowledge in the area of micro virtualization – docker
- A good understanding of networking, storage, and virtualization concepts and troubleshooting techniques
- An advanced skill of deploying orchestration based production site – docker-compose, kubernetes
- Advanced knowledge in a cloud-based production environment – GCP is preferred
- Perfect knowledge in BASH scripting language
- Basic SQL language knowledge
- Experience deploying and maintaining relational database – Mysql, postgres
- Basic skill of securing production environments.

- Advanced skills in monitoring multiple environments to a single dashboard.
- High English level – verbal & writing.
- Highly organized, motivated, and creative with the ability to self-manage.
- Ability to manage multiple tasks within tight deadlines and prioritize effectively, while delivering high quality work.
- A great Team player with Excellent inter-personal skills,
- Solution oriented with a high sense of quality, attention to detail, accuracy, and efficiency.
- CAN-DO approach.

<u>Advantages:</u>

- Knowing ELK stack.
- Nodejs deployment stack
- GCP experience
- Experience with Bigdata.
- Devops Certifications.
